

Problems with k9 on a mac...

Posted by kidushashem - 21 Nov 2011 17:31

Hey all, I've tried using k9 a few times on my mac and it seems that there's always some crazy bug that makes it crash and not work properly. (Either it doesn't filter well or the internet doesn't start).

Anyone who's had this problem and knows how to solve it, let me know please.

Also, will using k9 in conjunction with webchaver be problematic?

I've never used a Mac, but K9 should work fine with Web Chaver.

I originally had k9, and then installed webchaver. I couldn't get it to work. Tech support said I have to uninstall k9 first. I did, and then web chaver worked. They said I could probably install k9 again without a problem, but I haven't tried it.
