Filter help
Posted by navysealforhashem - 06 Feb 2012 20:27

_____

i currently have k9 installed on my machine, and it's doing a great job, but i have a problem that since it categorizes each site there is some sites that are actually shopping sites and it has a lot of bad stuff there, [i don't want to say which one because of self understood reasons], so i'm thinking of installing the webchaver or something similar.

but as i heard it will only send a report of where i visited to my partner so again my partner won't know that this site has something wrong in it...

i'd like that someone should be able to peak in every time i'm on the internet... and actually look on my screen...

any help?

_____

If you can do without that site, just remove access to it on k9. If that is not an option, you can install teamviewer and ask someone to check up on you from time to time.

_____

if you'd know which site it is, you'd also say that it's impossible [for most ppl] but teamviewer might be an option.

_____

Ya.. just give it to someone you trust and have it start with Windows with a permanent username and password.

Good luck!

_____

if you have JNet, then they have a special plan that can block pixels of skin color within a picture.

not acceptable for me, i just cant take it...

besides that Jnet is very easy to fool...

_____

TeamViewer is not an option at all...

it could be disabled easily

I just thought this shaboos for an idea to make a program that should take snapshots of your screen at random time and should send it to my rabbi chaver...

i can for sure get some programers to do it but it would cost $$$

what are you guyes saying to that idea? i think it's a good one no?

_____

my k9 filter doesn't let it thorough since it's categorized as hacking...

_____

Actual Spy - is a keylogger which allows you to find out what other users do on your computer in your absence. It is designed for the hidden computer monitoring and the monitoring of the computer activity. Keylogger Actual Spy is capable of catching all keystrokes, capturing the screen, logging the programs being run and closed, monitoring the clipboard contents.

Keylogger Actual Spy software features:

Logs all keystrokes, is case sensitive (keystroke logger).

Makes screenshots within the specified time interval.

Saves the applications' running and closing.

Watches clipboard contents.

Records all print activity.

Records disk changes.

Records internet connections.

Records all websites visited.

Records startup/shutdown.

All the information is stored in the encrypted log file.

Convenient interface of the log and screenshot view.

Generates the report in the text and html format.

Sends the report to the specified email, via FTP or local area network.

Works in the standard and hidden mode.

In the hidden mode it is invisible in all operating systems (in Windows NT/2000/XP/Vista/7 processes as well).

Provides the opportunity to protect keylogger with the password, so that nobody except you could view the logs.

Fast installation, convenient and understandable interface, various set of features, flexible configuration system.
