Filter a computer at work
Posted by Guard1 - 05 Apr 2019 08:43

_____

Hello Everyone,

First thing, I'm French so please excuse the spelling mistakes.

My computer at work is not filtered, and the thing is I work from home one day by week. I feel vulnerable on these work from home days because I have my unfiltered work computer with me and I am alone at home.

What do you recommend in such a situation ? I could try to install a filter on the computer but :

1. There is already a VPN installed on it so I'm affraid that the filters which use a VPN (the most efficient ones) won't work, are they efficient filters that doesn't use a VPN ?

2. I'm not sure what my boss would think about, if ever he discovers this some day. Why would someone install a parental control software on his professionnel computer ..

I would like to find a solution quickly, before the temptation is too high and I can't resist. I really feel vulnerable.

Thank you for your help guys !

Do the tapshic method

I'm not sure if Taphsic works for many people. Does it work for you?

But I wonder if gye created a Taphsic computer program yet - which is automated to charge your credit card each time there's a 3rd look...

That would be an easy way to raise anoother $500k

Anyone know is that was launched yet?

_____

If my boss asked me, I would say "It's not parental control software... I use it to block unsafe websites with viruses"

It's true: My filter doesn't only block shmutz, but also potential viruses. Maybe phrase it like that?
