

Smartphone filters

Posted by Moving_forward - 05 Apr 2016 00:47

Hi, this is my first day on a structured program to help myself. I know that without a filter I'm undoubtedly going to see things I'm trying to avoid. Does anyone have suggestions for a filter for an Android device that allows me to access the web and my social media accounts but block any inappropriate material. Thanks for creating a platform for people to help themselves and move forward.

Welcome M_F!

There's a dropdown on top of the page that you can click on the word 'filters' and will take you out of here

Make sure you know how to find your way back, or follow the smokestack

of my TRUCK
