

CompTIA Cloud Plus Engineers

Posted by Rohit118 - 29 Aug 2019 16:08

CompTIA Cloud Plus Engineers has a crucial role in maintaining telecommunication systems as they are responsible for planning, installing, testing, and maintaining the equipment to run a proper communication network. Their general duties include the maintenance and repair of equipment and construction of towers to ensure optimal performance. A telecom engineer's job involves the use of various tools such as interconnect devices, network facilities, and radios. A field engineer also works with engineers from other fields for equipment installation and then report to the upper management. A [CompTIA Cloud Plus](#) engineer should have some experience with telecommunication systems and at least a two-year degree for telecommunication field technician jobs. Telecom field engineering is a very demanding job because they have to work long hours and have to show up as soon as they receive a call when they're not on the job. A field engineer also needs to work in high-stress scenarios and repair the equipment till the service is restored.

Sorry Shluffy. You can't delete any posts once another post is posted afterwards, even if you posted the subsequent posts. So, unless that stillgoing guy deletes this post, I guess they're all here to stay. (Unless the mods get involved) :-)

Mazel tov on the status

np, i guess its like doing Teshuva , ill c"v fall but ill bounce right back after the deed is done , then you realize that it aint so easy to "delete"

thanks for the Elul shmooze, (how did you know my yiddishe name?)
