

Can the CE Filter Keep GMAIL & Block Google Plus

Posted by OTR - 15 Mar 2017 12:08

I have CE installed. Blocking facebook and twitter etc.. is not a problem. But blocking google+ could make problems for me to get my gmail since it is all part of the google website.

Does anyone have experience with this to know if it will create a functionality problem?

You are using the CE software? how did you manage that. Can you advise the site lists you allowed and disallowed?

I'm not 100% sure but I think if you whitelist accounts.google.com and mail.google.com it will allow gmail but nothing else.

~~Just a matter of tinkering with the block/allow lists. Oh boy, have I had fun doing that~~

Thanks GS.. I am trying to clarify this with a little more certainty. If I mess up my gmail it'll be a
reall big problem so I want to clarify beforehand.

Here's a more complete list I found:

gmail.com

mail.google.com

accounts.google.com

clients.l.google.com

geotrust.com

edgekey.net

akamaiedge.net

googleapis.com

ssl.gstatic.com

googleusercontent.com

gstatic.com

googlemail.l.google.com

apis.google.com

YMMV, use at your own risk, bla bla...

Thanks. Worth a try.. and for the disallow. I assume it is plus.google.com right?
