_____

In my experience there is always a slight intrinsic risk with video games because even in G
rated games the character designs can be sexualized and it's hard to predict what will pop
up. With that being said I just played through Pikmin 3 on the Nintendo, it was totally clean and
very fun!

_____

Arcade games like Pacman are good because they do not take you too far away from real life or
have inappropriate content. These are often sold in collections for a variety of systems. I know
this is a boring suggestion, but I'm only giving it as a very safe option -- there are definitely more
modern kosher games out there, but I don't think I can give a list with complete certainty.

Ah, I played some great RPGs in my childhood, but looking back a lot of the outfits are not very tzniut...

Thus this topic really interests me. As some have said, E rated Nintendo games perhaps. What do you play on, PC? Mobile? Super Nintendo?

_____

I am not at all an expert on the subject of what would make a game kosher. Generally at this point in my life I avoid video games (still do board games when it fits the circumstances) as I don't want to be increasing my time with technology in that sort of way which can, for me, become compulsive on its own. That being said, everyone's path is unique. Its difficult for me to suggest because even in games that are very simple and not consciously trying to arouse urges, they can contain things like immodestly dressed characters-- and since I don't want to look up which levels to avoid so as to not possibly stumble upon these things myself its hard for me to make a recommendation even as someone who has played many games in my life. I can say that as a general rule, board games and card games are much easier to ensure the permissibility of than video games. This is to the credit of the medium of video games, as it shows their complexity and ingenuity that one cannot fully know what may be kosher about modern games in detail without playing them or analyzing them (or maybe a game hechsher in the future!) . Many modern board games are quite complex and engaging and have enjoyable mechanics, and still some of the popular ones have PC adaptations. These may be a great way to engage with friends from a distance while discussing kosher subjects! Just be wary that just because they are *easier* to ensure the permissibility of does not mean that they are *ensured to be permissible* of course. We have to choose where we feel we are able to engage in the world so I leave it up to you to navigate that. I know this did not directly answer your question but I hope I at least provided some insight and offered options.

_____

Not exactly an RPG, but I don't think minecraft is so dangerous in this area (very pixelated non humanoid by design). Back in the day I did play on a server called wynncraft, which basically turns minecraft into an **incredible** rpg
