Bugs & Issues - Please report here
Posted by Markz - 28 Sep 2016 02:57

_____

Ok guys this is a serious thread

I have a close rapport (*shuychus* in yiddish) with **the.guard** and the tech support team, and he requested that if anyone has any issues, they should please post it on this thread, and I will try pass it on promptly

1. **Important**: Please specify the 'bug' with as much detail as possible.   e.g. what device you are using, where you see the issue ~~what mood you were in, which bug spray did you try~~, and so on. E.g. "Chat on my Mobile Device (Specify what model) there's this blue chat circle...
   Warning: Spoiler!

   "

2. **Update**: Reply here after you see the issue is resolved on your end.   So I can report that the bug is successfully [vanquished](#)

_____

Sometimes it can be a freak rare bug that only affects 1 person's device

Once a 2nd person reports, that confirms that there's a crisis of epic proportions

But in order to report it, could everyone that has the "stutter bug" please share here on what device and version this is occurring

_____

That issue is probably due to the person starting to type before the javascript that loads the editor code is ready. Should be an option to define the textarea after DOM has been loaded.

Can someone with access to the source add the new domain where the videos are hosted to the list of domains in the noexternallink script? Please see attached.

Thanks!

Thank you.

So, theoretically, if one waits a few seconds, it shouldn't happen.

And also, it will only happen in first letters of posts.

Doesn't explain the extra character that appearsl in my words at times (such as after the word appears).

Thank you so much

Sorry, I guess my theory is wrong. I personally never experienced this issue, so can't really know what causes it.

_____

Love the new app update released today. Handbook is beautiful with real ebook reader controls, plus offline support. Can't wait for the proper mapping of the back buttons and offline forums, etc...

Mark,

Thanks for the karma. I'm now bubbling with positivity. My added positive energy caused an overflow of your karma too!

No make sense

When your positive energy is emulated by me then we can start talking. I have many miles to go till then

_____

I am having an issue with my computer on GYE. Recently one of these things has been happening frequently: 1) The script runs too long and I get the option to kill or wait for the script to load. 2) The script stalls and I need to refresh the page. 3) The script loads but I need to wait a little bit of time before I'm able to click on anything. 4) I click on something and it doesn't go at first, either I need to click it again or I need to click it another time.

It's not my computer because I have a new computer that works quite well and has an i7 processor. I also am not having this issue on any other sites. I can't blame a filter for causing these issues because I have no filter on my laptop.
